

## THE STUDIO

Cris Cela Studio is a design firm based in Barcelona that develops interior design and architecture projects.

From the beginning, each project is designed in a personal way: design objects coexist with "custom" objects to create a particular atmosphere, a timeless, visual and emotional feeling. The details make each creation, proposal, suggestion, innovation and reference simple but sophisticated. An aesthetic where each element has its own power and expressive reason for being, while at the same time representing a part of the whole as the protagonist.

The studio offers a comprehensive service, from the first idea to the final submission. The permanent contact with the client is essential. The main aspects of the studio are personalized attention and careful attention to detail. The dialogue with the client is constant from the beginning to the end. The basic concepts of coherence, warmth and authenticity are the fundamental values to follow.

The firm collaborates with engineers, graphic designers and artisans to ensure that we have complete control of each project and its results.

For the studio, each client is different and each project is synonymous of passion and commitment.

## CRIS CELA

Formed at the Higher Technical School of Architecture of Barcelona (ETSAB), Cris begins her professional career in studios of **architecture** where she promotes the different facets that an architect must control: creativity, perception of the space and knowledge of materials and constructive solutions.

After ten years in the world of architecture, and having built residential and public buildings, she decides to know a new scale of design, the details. For that, she reaches the world of **interior design** collaborating with international studios such as Intercon, whose projects are mainly developed in the Middle East, and with Lázaro Rosa Violan, being a team leader in both studies.

Her interest in the environment also leads her to specialize in the branch of **sustainability** by obtaining a university master's degree based on bioclimatic design and deepening aspects of construction and design that respect the environment, maintaining an innovative and modern design.

At the end of 2019, the firm Cris Cela Studio is created to develop architecture and interior design projects: residential and commercial.
